

Time Change for Fall Back

In October we gain an hour. This is the 25-hour day.

For the movement back, you will require one extra hour of programming in your log. In your Music Scheduler, for this day only (Sunday), program the 1:00AM hour to have 120 minutes of inventory. Make this hour the one in which you reset the On Air machine's time (Windows does this automatically). If you do not wish to use the Music Scheduler, use the iMediaTouch Log Tools, to add 60 minutes worth of extra inventory as needed. You must remove any of the Syncs that you have for the 1AM hour as you will have two 1AMs on this day.

There are many ways to go about organizing the time change. Remember these things:

- You must add an hour of programming.
- If you are running Windows the time will change automatically at 1:59:59 AM. The time will go from 1:59:59 to 1am.

One final note: The traffic and music schedulers you are using have ways of dealing with the time change. Make sure to find out from your vendors how their software deals with the extra hour.
