

Issue: When I am auditioning the voice tracks, the first track plays for about 40 seconds before the voice track starts.

When auditioning the voice tracking make sure that you highlight the Track 1 information on the bottom section of the screen. Circled below you will see an example of this. Make sure that the title is grey and not black.

The screenshot shows a software interface with a table at the top and a timeline below. The table has columns for time, ID, name, and title. The timeline shows three tracks with their respective durations and markers.
